AYUSH PATIDAR

Indore, Madhya Pradesh | +91 8109154348 | rampra9981@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Results-driven AI & Software Engineer with extensive hands-on experience architecting production-grade backend systems, scalable REST APIs, and intelligent LLM-powered automation workflows. Proficient in Python, FastAPI, PostgreSQL, Redis, Docker, and AWS, with a strong background in Retrieval-Augmented Generation (RAG), asynchronous processing pipelines, and multi-tenant applications. Adept at translating complex business requirements into high-performance, maintainable software solutions that significantly reduce processing latency and streamline operational workflows.

PROFESSIONAL EXPERIENCE

Supersourcing | AI Engineer

March 2025 – Present | Indore, Madhya Pradesh, India

- Architected and scaled multi-tenant AI recruitment and enterprise platforms, engineering high-availability REST APIs using FastAPI, Flask, and PostgreSQL to support robust global throughput.
- Developed and deployed production-grade AI resume parsers and optimization engines utilizing OCR and LLMs, cutting processing latency by 50% via asynchronous Redis and Celery pipelines.
- Engineered core backend modules including billing frameworks and automated application engines, streamlining revenue collection and automating high-volume candidate workflows with 95% reliability.
- Built advanced agentic workflows such as SuperBot (RAG-based SQL Agent) and a real-time AI interview system using LangChain and OpenAI APIs, automating technical screenings for over 500 candidates monthly.
- Implemented WebSocket-based real-time notification systems and streamlined CI/CD pipelines via GitHub Actions for seamless AWS EC2 deployments.

PROJECTS

DataHire — AI Recruitment & Candidate Intelligence Platform

Python, FastAPI, PostgreSQL,, Redis, Celery, LLMs, NLP, AWS

- Engineered an intelligent hiring platform leveraging automated resume processing and advanced matching algorithms to pair candidates with prospective positions seamlessly.
- Constructed high-throughput document extraction pipelines employing PyMuPDFLLM, optical character recognition, and natural language processing to convert unstructured CVs into structured schema.
- Integrated vector search functionalities using dense embeddings, PostgreSQL, and pgvector to execute hybrid semantic retrieval alongside structured relational filters.
- Deployed generative LLM workflows automating skill classification, targeted CV enhancement recommendations, section-level rewrites, and applicant tracking system optimization.
- Architected non-blocking task execution models utilizing Celery workers and Redis queues, alongside core services for subscription management, transaction processing, and status tracking.

ALOpay — Digital Wallet & Fintech Platform

Python, FastAPI, PostgreSQL, SQLAlchemy, Redis, AWS, Docker, Kubernetes, Terraform

- Spearheaded system architecture for a robust financial services infrastructure serving end-users, agents, and merchants via ledger-backed wallet services.
- Designed core payment APIs and stateful transaction flows supporting real-time balance operations, QR payment networks, and peer-to-peer transfer requests.

- Formulated data persistence layers using SQLAlchemy and PostgreSQL, optimized with Redis caching strategies to sustain elevated service loads.
- Hardened platform security and reliability by integrating pre-signed S3 object generation, automated identity verification checks, push messaging, and robust fault-handling modules.
- Provisioned containerized cloud deployment environments on AWS EKS with Infrastructure as Code via Terraform, ensuring complete environment isolation and telemetry coverage.

Shule Direct — AI-Powered Multi-Tenant EdTech Platform

Python, FastAPI, AWS Bedrock, LLMs, REST APIs

- Architected robust scalable backend services for a multi-tenant educational ecosystem, implementing high-performance REST APIs and granular role-based access control (RBAC) mechanisms to enforce secure user workflows.
- Integrated enterprise AWS Bedrock AI models to deliver automated quiz generation, context-aware explanations, and interactive conversational tutoring components directly into the core platform.
- Engineered intelligent generative learning algorithms and adaptive student engagement engines to synthesize tailored dynamic educational content in real time.
- Streamlined backend API pipelines and model invocation interfaces, significantly decreasing processing latency to deliver sub-second response throughput across active user sessions.
- Spearheaded production deployment operations for intelligence modules, effectively linking generative model capabilities with existing cloud infrastructure and distributed services.

EDUCATION

Acropolis Institute of Technology and Research — Indore

Bachelor of Technology in Computer Science Engineering (Data Science Specialization) | CGPA: 7.52 / 10.0 | 2021 – 2025

- **Relevant Coursework:** Software Engineering, Operating Systems, Object-Oriented Programming, Database Management Systems, Algorithms, Artificial Intelligence, Machine Learning, Deep Learning.

Jawahar Navodaya Vidyalaya — Shyampur, Sehore

12th Grade (Mathematics) | Score: 91% | 2020 – 2021

TECHNICAL SKILLS

- **Programming Languages:** Python, JavaScript, TypeScript, SQL
- **Backend Frameworks:** FastAPI, Flask, Django, Node.js, REST APIs, WebSockets
- **Databases & Vector Stores:** PostgreSQL, MongoDB, Redis, MySQL, ChromaDB
- **Cloud & Infrastructure:** AWS (EC2, S3, Lambda, API Gateway, RDS, Bedrock)
- **DevOps & Tools:** Docker, Kubernetes, Git, GitHub Actions, Jenkins, ArgoCD, Cursor
- **AI, ML & LLMs:** LangChain, RAG, Hugging Face, LLMs, NLP, TensorFlow, Scikit-learn, PyTorch

CERTIFICATIONS

- **NPTEL:** Python for Data Science
- **DataCamp:** Data Science Career Track
